DUTCH PASSION

CBD Mazar

CBD Mazar es el cruce de CBD Charlotte's Angel x Mazar de Dutch Passion. Esta semilla feminizada (mayormente índica) ofrece un CBD de 10-13% con THC por debajo del 1%, y florece en unas 8 semanas con efecto muy tranquilo.

Principalement indica

Therapeutic benefits

- Calme l'anxiété
- Soulage la douleur
- Aide à dormir

Flavours and smell

Agrume · Épices · Pin · Terreuse

Effects effects

Endormi · Détendu

More about CBD Mazar

CBD Mazar une la riqueza en CBD de Charlotte's Angel con la rapidez de Mazar. Termina de florecer en unas 8 semanas, una menos que su progenitora, y rinde 400-500 g/m² en interior. Una elección sensata si buscas comprar semillas feminizadas de CBD con ciclo corto.

The effect is calm and relaxed, centred on the body with very little or no psychoactivity. It's a laid-back choice for anyone who wants a gentle experience.

Flower Appearance. Earthy, spicy aroma, with pine and citrus and floral touches. Some phenotypes come close to a kush with sour nuances.

Plant morphology. Compact or medium-sized structure, with Indica dominance. Outdoors or in a greenhouse, it can yield between 250 and 750 g per plant, and the harvest takes place in late September in warm areas.

Frequently Asked Questions

What is the ideal climate for growing CBD Mazar?
It prefers a warm, dry climate. It doesn't like high humidity: in the final stretch of flowering, indoors, it's best to keep it at around 35-40%.

Which training techniques work best with CBD Mazar?
Its compact structure is easy to manage with early topping and a little LST. It doesn't need extensive training to form an even canopy.

What sort of fertiliser does CBD Mazar need?
It works with balanced nutrition, raising phosphorus and potassium during flowering. Avoid excess so the plant doesn't become too leafy.

What are the ideal watering and humidity conditions for CBD Mazar?
Water when the substrate dries out on the surface. Ventilate well and watch the humidity to avoid mould in the buds.

Does the CBD Mazar plant need pruning?
Remove the lower leaves and the branches that get no light. Heavy pruning isn't needed on a plant that is already compact.
