More about Charlotte's Dream CBD Autoflower

Charlotte's Dream CBD Autoflower offers high CBD without depending on the photoperiod. These autoflowering seeds from Growers Choice start from Charlotte's Web and Blue Dream CBD, with 18-22 % CBD and very low THC. If you are looking to buy an easy CBD autoflowering plant, this one delivers.

With such a low THC content, the experience is mild and lacks the psychoactive intensity of potent strains. It offers a calm and comfortable high, ideal for those who prefer to keep a clear head. The response varies from person to person.

Appearance of the Flower. Flowers with a sweet fragrance which, when consumed, leaves a blend of sweetness and freshness. The flavour is very fruity, reminiscent of exotic strains, a far cry from the typical hempy taste of other CBD strains.

Plant morphology. A compact plant growing to around 85–105 cm indoors, with sativa genetics and a short flowering cycle of around 9 weeks. It is easy to grow in small spaces and on balconies.

Frequently Asked Questions

What is the ideal climate for growing Charlotte's Dream CBD Autoflower?
It tolerates both hot and cold climates. Outdoors it prefers direct sun and ventilation; indoors, stable temperatures with no spikes.

Which training techniques work best with Charlotte's Dream CBD Autoflower?
Use gentle training, such as light LST early on. Avoid heavy stress or late transplanting, because the cycle is short.

What type of fertilisation does Charlotte's Dream CBD Autoflower need?
It prefers low nutrient doses. A gentle fertiliser, with a little more phosphorus and potassium during flowering, is enough.

What should watering and humidity be like for Charlotte's Dream CBD Autoflower?
Water when the substrate dries on the surface and avoid excess water. Moderate humidity and moving air prevent problems.

Does the Charlotte's Dream CBD Autoflower plant need pruning?
There's no need to prune hard. Remove only dead lower leaves or those shading the flowers, and do it early.
