More about Cosmos F1

Cosmos F1 comes from a pure inbred Oregon CBD line and is presented as a very high-CBD autoflowering F1 with barely 0.5% THC. It is an option for anyone who wants to grow a non-psychoactive plant with good yields. Harvest 75-85 days after sprouting.

The effect is clear and focused, almost meditative. It relaxes the body whilst the mind remains alert and without any feeling of intoxication, so it’s ideal for anyone seeking tranquillity without losing control of their day.

Flower Appearance. Many flowering sites with long, slender flowers, something typical of its sativa heritage. The aroma blends fresh pine with a creamy, biscuit-like note, with a spicy touch at the end and terpenes such as farnesene, limonene, myrcene and pinene.

Plant morphology. A tall plant with the classic Christmas tree silhouette and bright green foliage. It grows to a very uniform height and shape, reaching around 70–100 cm according to the fact sheet, and leaves plenty of space between the side branches.

Frequently Asked Questions

What is the ideal climate for growing Cosmos F1?
It adapts to short summers and moderate temperatures, from 20 to 26 °C. Outdoors, sow early to complete the cycle at a relaxed pace.

Which training techniques work best with Cosmos F1?
As it's autoflowering, gentle training is best. Light LST or careful bending helps spread the light without delaying development.

What sort of fertiliser does Cosmos F1 need?
Feed with moderate doses, slightly below what the manufacturer indicates at first, and increase cautiously. In flowering, provide more phosphorus and potassium.

What are the ideal watering and humidity conditions for Cosmos F1?
Water when the top of the substrate dries out and avoid waterlogging. Moderate humidity and good ventilation reduce the risk of mould on the flowers.

Does the Cosmos F1 plant need pruning?
It doesn't require severe pruning. Just remove the lower leaves and the small twigs that get no light, and avoid cutting much on an autoflowering plant.
