More about Joanne's CBD

Joanne's CBD is the option for anyone looking for the nuances of CBD without the intensity of THC. It crosses Session with Juanita la Lagrimosa and has 15% CBD against 0.25-0.75% THC, with a 50-55 day flowering and up to 550 g/m² indoors.

The experience is clear, lucid and uplifting, with a calm tone that keeps your head clear. It's comfortable for daytime, for concentrating or for relaxing without feeling heavy. It's a variety designed for those looking for a smooth, functional experience, far from the classic narcotic effect.

Flower Appearance. Elongated, resinous buds with a fruity, sweet aroma reminiscent of toffee, with a spicy edge and a light hint of skunk.

Plant morphology. A predominantly sativa strain of medium height, reaching around 120 cm indoors without training. Outdoors, it can reach around 180 cm, with long branches and a good response to training.

Frequently Asked Questions

What is the ideal climate for growing Joanne's CBD?
It adapts to mild climates with short summers, and the outdoor harvest arrives in early October. Indoors, it prefers stable environments.

Which training techniques work best with Joanne's CBD?
It responds well to topping and LST, which keep its height under control. In small pots it can be kept to around 80 cm.

What sort of fertiliser does Joanne's CBD need?
An organic or gentle fertiliser, rich in phosphorus and potassium in flowering, enhances its terpenes. Avoid excess, which spoils the flavour.

What are the ideal watering and humidity conditions for Joanne's CBD?
Water regularly without waterlogging and keep humidity moderate. Lower the humidity a little at the end to protect the buds.

Does the Joanne's CBD plant need pruning?
A light pruning of lower leaves and weak branches is sufficient. A well-ventilated plant retains its aroma better. An open, airy canopy helps the buds to mature evenly.
