More about Purplematic CBD

Purplematic CBD está pensada para quien busca un perfil rico en CBD sin la subida típica del THC. Entre las semillas de marihuana autoflorecientes de Royal Queen Seeds, ofrece 17% de CBD, un ciclo de 60-70 días desde la germinación y 400-450 g/m² en interior.

The effect is clear and energising, without that ‘high’. It’s best enjoyed during the day and is ideal for anyone who values concentration. The aroma is reminiscent of earth, pine and red berries, whilst the flavour offers hints of caramel, fruit and pineapple.

Flower Appearance. Flowers with an intense purple heart and strikingly sized pistils. The overall effect is eye-catching and aromatic.

Plant Morphology. Autofloreciente de crecimiento rápido, con unos 120 cm en interior y unos 140 cm en exterior según el texto de la marca. En interior se recomiendan unas 12 plantas por m² en macetas de 7 litros. Los pistilos grandes y el corazón morado hacen que destaque en el cultivo.

Frequently Asked Questions

What is the ideal climate for growing Purplematic CBD?
It prefers long, warm summers. Outdoors it does well in direct sun, and indoors at stable temperatures.

Which training techniques work best with Purplematic CBD?
Low-stress techniques, such as gentle LST, are enough. Avoid topping, because the cycle is short and leaves no room for recovery.

What sort of fertiliser does Purplematic CBD need?
Use gentle fertilisers and low doses, especially during the first few weeks. Too many nutrients can burn the leaves.

What are the ideal watering and humidity conditions for Purplematic CBD?
Water little and often in small pots, without waterlogging. Indoors, keep humidity at a medium level to protect the buds.

Does the Purplematic CBD plant need pruning?
There's no need to prune. Removing a leaf that blocks the light is enough for this variety.
